Hong Kong Health Check (HKHC) is a Hong Kong leading medical centre provides high quality with professional medical diagnostic and health care service. The brand new flagship centre Hong Kong Health Check Tower is opened this April becoming the landmark in Jordan. With the concern of indoor air quality, an innovative active green wall namely IOT Active Greenwall (IAG) is installed in the HKHC Tower. The IAG makes use of green plants roots to absorb the pollutants in the air like PM2.5, VOC, HCHO, Bacteria and Fungi Spores. In the mean time, the IAG system monitors the Indoor Air Quality 24/7 providing a complete picture of air quality on site.

People at HKHC Tower can now enjoy not only the fresh clean air made indoor but also the vibrant green environment.

“The aforementioned study, which surveyed around 16,000 people across 14 countries in North America and Europe, found a pronounced disparity between how much time people think they’re spending inside versus the reality of how many hours a day are actually spent indoors. While most survey respondents reported that they think they spend around two-thirds of their time inside, the number is actually quite a bit higher. Previous research has found that around 90 percent of people spend close to 22 hours indoor every day. One in six respondents to the YouGov survey, too, admitted that they practically never go outside, spending up to 24 hours a day indoors.”
